

# DIEMAX™ L DIE SPRINGS

## Die Spring Basics

A die spring is a highly engineered mechanical spring with specific wire designs that stores energy elastically by resisting movement when pressure is applied. The desired wire segment is selected to produce the maximum amount of force within a minimal amount of space.

**Altering Die Springs** Each die spring is carefully engineered to perform within specific applications. Under no circumstances should you alter a die spring. Altering a die spring will change its designed characteristics and allows additional stresses to occur causing early failure. Grinding on the die spring not only changes the spring's original properties, but the heat from grinding can change the temper of the material and negatively affect the spring's performance.

**Compressed Length** The sum of the preload travel and operating travel.

**Corrosion** Frequently, die spring failure can be traced to corrosive elements which affect the surface of the spring's material, causing premature failure. Be aware of conditions that may affect the spring's surface such as rust, lubricants, soaps, and chemicals. Clean, protected die springs provide the best performance.

**Cycle Rate** The more rapidly a spring is cycled, the greater the need to operate in the recommended long life deflections from the catalog.

**Die Spring Guidance** Make sure that the hole size and/or rod size match the die spring's operating dimensions.

**Duty Ranges** We offer 4 separate duty ranges to best suit your applications – Medium Duty, Medium Heavy Duty, Heavy Duty, and Extra Heavy Duty. Do not mix springs of different duties.

**Free Length** The length of the spring without any load or force applied.

**Hole Diameter** Die springs are designed to be used in a hole dimension as indicated in the catalog. The actual O.D. will be somewhat smaller to prevent interference.

**Material** In our case, the spring material is High Tensile Strength Chrome Silicon Material. We use an optimal rectangular wire design. The maximum rated service temperature is 425°F.

**Operating Travel** Operating travel is the deflection of the spring where it is operating between the preload and the total travel of the spring during operation. This is the area where the actual work is performed.

**Preload** The initial force which is applied to a die spring. Preload is recommended to compress the first coils at each end where additional stresses are present because of the turn-down of the end coils. Applying a preload will extend the life of the spring.

**Quality** Our die springs are manufactured in an ISO9001-2008 facility.

**Rates** Die spring rates are normally listed as *Pounds per Inch of deflection* (i.e. 60 pounds load per inch.) As a die spring is deflected, the loads will increase for the amount of travel it is deflected. That is, a spring with a 60lb/inch rate will produce 60 lbs of resistance at 1" of travel, 120 lbs. at 2" of travel, etc. For purposes of simplification, the loads in our catalog are shown in pounds needed to deflect a spring 1/10<sup>th</sup> of an inch. Simply multiply the rates given by 10 to determine the actual spring rate.

**Rod Diameter** Die springs are designed to fit over a rod for guidance and the actual I.D. of the spring is actually somewhat larger to fit over a rod without interference.

**Solid Height** Solid height is the height of the spring when all of the coils are totally collapsed to solid. You never want to operate a die spring close to this condition.

## Die Springs Product Features

- ◆ For same day shipments, we stock them so you don't have to
- ◆ Inch sizes manufactured to industry standard colors
- ◆ Yields reliable, trouble-free performance
- ◆ Manufactured in an ISO 9001:2008 certified facility
- ◆ Manufactured from spring-quality Chromium Silicon alloy, high-tensile strength steel in accordance with ASTM A1000-99 specifications
- ◆ Optimal rectangular wire design

# Spring Accessories

## Spring Cages

- ◆ Our spring cages enhance die spring life by providing a flat, hardened die pocket for spring operation.
- ◆ Material: A513 tube steel.
- ◆ Conforms to NAAMS standards.

# Spring Accessories

## Spring Retainers

- ◆ These spring retainers hold individual springs firmly in position while the die is being assembled or disassembled. Pre-loading the spring is easy since the springs can be set individually, which avoids working against the combined force of the springs.
- ◆ Available for springs 1-1/4" (32mm), 1-1/2" (38mm) and 2" (50mm) diameters and any free length where clearance permits.
- ◆ Material: steel

# Special Heavy Duty Compression Springs

## CUSTOM SPRINGS

A custom spring is any spring that has:

- ◆ Unique physical attributes
  - Special wire material, plating or paint
  - Custom free lengths, diameters, solid heights, rates, number of coils or custom loads at a given deflection
- ◆ Critical tolerances
- ◆ Specific inspection or certification requirements
  - Military specifications
  - 100% inspection of critical characteristics
- ◆ Statistical reports
- ◆ Computer controlled multi-point tests

## MANUFACTURING CAPABILITIES

- ◆ Outside diameters from 3/16" to 9-1/2" (4.8mm to 241mm)
- ◆ Free length from 1/2" to 90" (12.5mm to 2286mm)
- ◆ Round Spring wire 0.014" minimum to 1.625" (.36mm to 41.3mm)
- ◆ Standard rectangular wire up to 0.408" x 0.469" (10.4mm to 11.9mm)

*Modified trapezoidal cross section of rectangular wire springs changes to a "D" cross section during coiling to achieve a low stress level that means longer spring life.*

## COATINGS AVAILABLE

- ◆ Plain, no paint
- ◆ Oiled
- ◆ Electroless Nickel
- ◆ Chrome
- ◆ Zinc
- ◆ Powder Coating
- ◆ E-coat Paint
- ◆ Mil-spec Coatings
- ◆ Cadmium
- ◆ Dacromet®
- ◆ Others on request

## SPRING SPECIALS QUOTING PROCESS

- ◆ Submit custom spring print
- ◆ Submit application information
  - Include description of application
  - Life expectations
  - Critical dimensions, tolerances, certifications required

## Other Anchor Lamina Products

Anchor Lamina supplies the most extensive selection of springs and pressure control devices used in die sets, molds, fixtures and machines. Among the products Anchor Lamina stocks are the following:

### Disc Springs

- ◆ Efficient use of space, providing high spring forces with small deflections
- ◆ May be used in series or parallel
- ◆ Available in a variety of sizes

### Formathane® Urethane

- ◆ Specially formulated for metalforming
- ◆ Greater abrasion resistance
- ◆ Higher pressures with added durability

### Marsh Mellow® Die Springs

- ◆ An effective alternative to costly nitrogen gas springs
- ◆ Widely used in the automotive and metal stamping industries
- ◆ Available from 1-1/8" to 6" O.D.

### MRO Utility Springs

- ◆ Engineered for durability
- ◆ Unlimited applications for general utility and industry
- ◆ Available in assortments
